

More on Words

Chapter 7

LDER

Lexical Development across languages

- Is lexical development the same for all languages?
- Language specific vs language universal patterns
- Compare English vs Italian, from 8-30 months

Universal Stages of Growth

- Routines and Word Games
 - Expressive vocabulary of 0-10 words
 - Categories like noun/verb not useful
 - Speech acts (performatives): vocal conventions used to achieve a social function
 - "bye"; "uh-oh"; "hi"
- Reference
 - Expressive vocabulary of 50-200 words
 - Most words are nominals; words that establish reference
- Predication
 - Verbs and adjectives
 - Reflect ability to encode relational meanings
 - Begin to increase in number after about 100 words
- Grammar
 - Grammatical function words
 - Growth after about 300-500 words
 - Early use may reflect memorized routines
 - After 400 words may reflect emergence of grammar

Really Universal?

- Changes in composition of vocabulary hypothesized to reflect universal developments in logical and conceptual substrates of meaning
 - One argument: nouns must precede verbs in development because nouns are easy to grasp; verbs are more difficult to perceive
- Some studies of Korean and Chinese suggest that verbs may develop earlier than nouns in these languages

Current Questions

- Do verbs necessarily start to develop relatively late? In all languages?
 - What about a language for which verbs may be more salient than in English? For example, Italian.
- What is the relationship between vocabulary size and grammatical function words?
- How to address these questions?

The CDI

- MacArthur Communicative Development Inventory
 - Parental report checklist
 - Developed for English; adapted for Italian
- Two scales:
 - Words and Gestures (infant scale; 8-16 months)
 - Part I: Checklist of 396 words
 - Parents indicate if the child understands the word; understands and produces the word
 - Part II: checklist of 63 communicative gestures
 - gestures for communication, play, imitation of parents and other adults, and activities with objects
 - Words and Phrases scale (toddler scale; 16-30 months)
 - Part I: Assesses productive vocabulary (content and function words)
 - 680 words (English); 670 words (Italian)
 - Part II: Grammatical Development
 - use of possessives, plurals, and tenses, etc.

Word Categories

- Nominals (generally)
 - Common nouns, proper nouns, places to go, sound effects (used to refer to animals, etc.)
- Common nouns (specifically)
 - Words that adults use to refer to concrete objects (i.e., exclude names for people, sound effects, places to go)
- Proper nouns (specifically)
 - Proper nouns and terms for people
- Sound effects
 - (vroom, meow)
- Routines
 - "hi" "bye" words referring to events: "breakfast" "nap"
 - Familiar commands ("don't")
- Verbs
 - Action words (uninflected)
- Adjectives
 - Descriptive words
- Grammatical Function Words

Who participated?

- English speaking children
 - 659 infants from 8-16 months of age
 - 1001 toddlers from 18-30 months of age
- Italian speaking children
 - 195 infants from 8-16 months of age
 - 386 toddlers from 16-30 months of age
- Equal numbers of boys and girls in each sample
- Across a spectrum of socio-economic levels
- Children were excluded if they had:
 - medical/neurological problems
 - Substantial exposure to a second language

Infants from 8-16 months

- Comprehension:
 - No differences between English and Italian infants
- Production:
 - Italian-speaking group lagged behind English-speaking group
- Overall, production lower than comprehension
- Huge individual differences (comprehension: mean 105, range 0-396)

Figure 7.1 Growth of comprehension & production vocabulary from 8-16 months.

Toddlers from 16-30 months

- Expressive vocabulary
- English-speaking children slightly ahead of Italian-speaking children
- Large individual differences
 - (at 24 months, mean of 300 words, range of 50-600)

Figure 7.2 Vocabulary size as a function of age from 18-30 months in English & Italian children.

Making a fair comparison

- Due to differences in growth across English and Italian
- Huge variability in vocabulary size at any given age
- Looking at vocabulary growth by age may be unfair
 - Look at vocabulary growth by size of child's vocabulary – *not* age of child

Italian Verb Advantage?

- Italian is a good test case to try to find out about early onset of verbs
 - Allows extensive word order variation
 - Variation in position helps children identify words
 - Pro-drop language; ~70% subjects omitted
 - Verbs often found in salient sentence initial or final positions
 - Rich verbal morphology
 - Italian children sensitive to verb agreement at an early age

Cross-linguistic differences in types of words produced

- Divide children into groups based on vocabulary size
- Italians seem to have an advantage for nominals (broadly defined), but not verbs

Table 7.1 Composition of production vocabulary from 18-30 months as a function of language and vocabulary size

Variable	Language	Number of words in production vocabulary				
		1-5	6-10	11-20	21-50	>50
% Nominals	English	80.4	75.4	70.7	72.8	73.6
	Italian	91.0	84.5	74.7	70.4	72.6
	Italian	16.4	22.9	32.9	44.5	54.1
% Common nouns	English	20.6	28.1	31.4	36.5	46.2
	Italian	32.3	24.8	16.5	10.7	6.5
	Italian	35.1	35.4	19.6	14.9	11.1
% People	English	30.7	27.1	20.4	15.5	7.7
	Italian	35.3	21.0	23.6	16.5	11.8
	Italian	14.2	19.5	18.7	15.0	9.1
% Sound effects	English	7.8	13.3	20.7	20.1	16.4
	Italian	0.5	1.1	2.1	2.7	6.8
	Italian	1.3	0.7	2.8	4.1	4.5
% Routines	English	1.7	0.5	2.7	4.3	4.9
	Italian	0.0	0.4	0.5	1.0	2.1
	Italian	2.2	1.5	4.8	7.0	11.6
% Verbs (Direct + Adj)	English	1.3	1.0	3.3	6.0	6.6
	Italian	0.0	0.4	0.5	1.0	2.1
	Italian	2.2	1.5	4.8	7.0	11.6
% Adjectives	English	2.2	1.5	4.8	7.0	11.6
	Italian	1.3	1.0	3.3	6.0	6.6
	Italian	3.2	3.6	5.8	5.2	5.4
% Prepositions (Direct + Adj)	English	3.2	3.6	5.8	5.2	5.4
	Italian	0.0	1.3	1.3	3.5	4.0
	Italian	0.0	1.3	1.3	3.5	4.0

Developmental Changes: Nouns and Verbs

- 45% is proportion of entire checklist that is common nouns; 14% for verbs
- If acquisition of nouns (or verbs) were constant or random – proportion should be flat line
- Common nouns increased in importance with vocabulary growth from 8-16 months
- Verbs stayed flat

How much variation is there?

- Referential Style – use of nouns
- Similar developmental and stylistic factors at work for both languages

Really no Italian verb advantage?

- CDI list contains fewer verbs (14%) than nouns (45%) – so a difference between nouns and verbs for total vocabulary not surprising
- Compute
 - Noun opportunity score (nouns reported / 182)
 - Verb opportunity score (verbs reported / 55)
- Nouns still grow faster than verbs – in both languages!

Production summary

- Nouns and verbs grow (occupy greater proportion of vocabulary as vocabulary size increases)
- What shrinks?
 - Proper nouns
 - Sound effects
 - Routines
- Proper nouns, routines shrink more in English (cultural differences?)
- In both groups, early growth of nouns, consistent with developmental sequence from reference stage to predication stage

Table 7.1 Composition of production vocabulary from 18-30 months as a function of language and vocabulary size

Variable	Language	Number of words in production vocabulary				
		1-5	6-10	11-20	21-50	>50
% Nominals	English	80.4	75.4	70.7	72.8	73.6
	Italian	91.0	84.5	74.7	70.4	72.6
	Italian	16.4	22.9	32.9	44.5	54.1
% Common nouns	English	20.6	28.1	31.4	36.5	46.2
	Italian	32.3	24.8	16.5	10.7	6.5
	Italian	35.1	35.4	19.6	14.9	11.1
% People	English	30.7	27.1	20.4	15.5	7.7
	Italian	35.3	21.0	23.6	16.5	11.8
	Italian	14.2	19.5	18.7	15.0	9.1
% Sound effects	English	7.8	13.3	20.7	20.1	16.4
	Italian	0.5	1.1	2.1	2.7	6.8
	Italian	1.3	0.7	2.8	4.1	4.5
% Routines	English	1.7	0.5	2.7	4.3	4.9
	Italian	0.0	0.4	0.5	1.0	2.1
	Italian	2.2	1.5	4.8	7.0	11.6
% Verbs (Direct + Adj)	English	1.3	1.0	3.3	6.0	6.6
	Italian	0.0	0.4	0.5	1.0	2.1
	Italian	2.2	1.5	4.8	7.0	11.6
% Adjectives	English	2.2	1.5	4.8	7.0	11.6
	Italian	1.3	1.0	3.3	6.0	6.6
	Italian	3.2	3.6	5.8	5.2	5.4
% Prepositions (Direct + Adj)	English	3.2	3.6	5.8	5.2	5.4
	Italian	0.0	1.3	1.3	3.5	4.0
	Italian	0.0	1.3	1.3	3.5	4.0

Receptive Vocabulary: 8-16 months

- No verb advantage in production
- What about in comprehension?
- For common nouns:
 - Proportion larger for comprehension than production
 - Italian-speaking children ahead of English-speaking children
- For verbs:
 - Italian-speaking children ahead of English-speaking children (by a little bit)

Table 7.2 Composition of receptive vocabulary from 8-16 months as a function of language and vocabulary size

Variable	Language	Number of words in receptive vocabulary						
		1-20	21-50	51-100	101-150	151-200	>200	Total
% Nouns	English	40.4	42.6	41.2	43.2	43.4	41.8	43.8
	Italian	66.8	67.0	63.7	64.2	60.4	60.7	63.8
% Common nouns	English	22.0	17.2	44.2	48.6	47.5	48.4	41.5
	Italian	31.7	48.5	47.0	49.2	47.8	48.2	45.2
% People	English	31.5	14.0	4.2	5.4	4.7	4.1	11.1
	Italian	29.4	14.8	8.6	6.4	4.8	4.0	10.9
% Sound effects	English	6.2	3.8	5.2	4.8	4.3	3.7	5.6
	Italian	5.1	7.0	5.4	8.5	3.7	3.5	8.9
% Routines	English	27.3	18.6	13.1	9.8	8.6	6.6	14.1
	Italian	25.2	18.7	12.5	9.9	8.4	6.4	13.3
% Verbs	English	6.8	10.0	14.6	15.0	14.6	14.0	13.2
	Italian	6.9	10.8	17.6	17.7	20.0	17.5	15.3
% Adjectives	English	2.8	5.2	6.7	6.9	7.2	7.8	6.1
	Italian	0.5	1.6	3.0	4.4	5.5	6.5	3.4
% Predicates (Verb + Adj)	English	9.7	15.2	21.3	21.9	23.9	23.8	19.3
	Italian	7.4	12.4	20.6	22.1	25.5	24.1	19.0
% Function words	English	2.5	3.6	4.1	4.5	5.0	7.1	4.5
	Italian	0.6	1.9	3.2	3.5	5.4	8.0	3.7

Receptive Vocabulary: 8-16 months

- Nouns outnumber verbs even in comprehension for both languages
- Supports developmental sequence from nouns to verbs in both languages
- Small advantage for verbs in Italian due to just a few specific words?

Figure 7.6 Percent nouns vs. verbs in comprehension for English vs. Italian infants from 8-16 months.

First produced words in English and Italian

- (percentage of children in sample who produced a word, rank-ordered)
 - Non-nominals: *
 - Verbs capitalized
- English
 - No verbs in top 50
 - Most of top ten are routines, sound effects, names for people
- Italian
 - One verb in top 50
 - Most of top ten are routines, sound effects, names for people
- If all non-nominals treated as verbs, then Italian actually has fewer "verbs" in top 10 words

Table 7.3 First 50 words in production for English vs. Italian infants

Rank	English	Italian

- First comprehended words in English and Italian
 - (percentage of children in sample who comprehended a word, rank-ordered)
 - Non-nominals: *
 - Verbs capitalized
 - English
 - Some verbs in top 50
 - Most of top ten are routines, sound effects, names for people
 - Italian
 - Some verbs in top 50
 - Most of top ten are routines, sound effects, names for people
 - If all non-nominals treated as verbs, then Italian actually has fewer "verbs" in top 10 words

For young children (8-16 months)

- Both languages develop similarly
 - Despite cross-linguistic differences in input and salience of verbs
- First words are sound effects, nouns, routines, names for people
- Nouns predominate and grow fast, in comprehension and production, in both languages
- Verbs emerge earlier and grow faster in comprehension than production – but are consistently outnumbered by nouns
- Grammatical function words are very rare among first words

Toddlers (16-30 months)

- Examined four word categories
 - Common nouns (~40% of list)
 - Animals, toys, food and drink, clothing, body parts, household objects, furniture, rooms
 - Predicates (~24% of list)
 - Verbs and adjectives
 - Closed-class words (~14% of list)
 - Social terms (~10% of list)
 - Sound effects, names for people, routines

English-speaking children

- Preponderance of common nouns
- Slow growth of predicates
- Rarity of closed-class words
- Sharp, non-linear drop in social words

Italian-speaking children

- Preponderance of common nouns
- Slow growth of predicates
- Rarity of closed-class words
- Sharp, non-linear drop in social words

English and Italian are similar

Common Nouns

- Similar shape of growth curve in English and Italian
- Develop for English-speaking children faster
- Italian-speaking children catch up, and even slightly overtake the English speakers

Predicates

- English-speaking children enjoy early advantage
- Italian-speaking children catch up
- No differences after about 100 words

What about just verbs?

- Slight advantage for English-speaking children
- Contrary to predictions of a verb advantage in Italian

Social Terms

- Italian-speaking children have advantage in social terms (for 7 of 8 age categories)
- Could reflect cultural difference
 - Italian-speaking children may be closer to extended family
 - More relatives to name
 - More opportunities for routines

Figure 7.11 Social terms as a proportion of total vocabulary size (dotted line = checklist ceiling).

Closed-class Items

- Italian-speaking children ahead of English-speaking children at most vocabulary sizes
- English-speaking children catch up at about 600 words

Figure 7.12 Closed-class words as a proportion of total vocabulary size (dotted line = checklist ceiling for English (13%) and Italian (13.7%)).

Summary for Toddlers

- Nouns and verbs
 - Small differences favoring English-speaking children
 - Does not support prediction of a verb advantage in Italian!
- Social words
 - Italian-speaking children have larger repertoire
- Closed-class words
 - Small advantage for Italian-speaking children

Conclusions

- Nouns vs verbs
 - No evidence for earlier emergence of verbs or predicates in Italian compared to English
 - Slight advantage in English for nouns and verbs may reflect cultural differences
- Function words
 - Rare in both languages early (<200 words)
 - Growth correlated with overall vocabulary size
 - Linear growth in Italian
 - Non-linear growth in English
- Differences between English/Italian (CDI) and Korean/Chinese (free production) may reflect methods; testing Korean with CDI revealed similar pattern as for English and Italian
 - Free speech vs. parental checklist may reflect what children *prefer* to use, not what they are able to use

Advice for paper
